

SD-WAN Secure

SD-Wan Fortinet Secure

Enjoy Next-Generation Security with
Advanced WAN Capabilities.

- Native Next-Generation Security.
- Multi-Branch VPN overlays
- Highest Quality of Experience for Voice and Data Traffic.
- Real-time Monitoring, Analytics and Reporting.
- WAN Resiliency and intelligent Application steering.
- Reduced connectivity and operating expenditure costs.

Product Overview

SD-WAN Secure delivers intelligent networking and security capabilities in a unified solution, targeting Enterprise and SME customers who have a high need for WAN resiliency with security in mind.

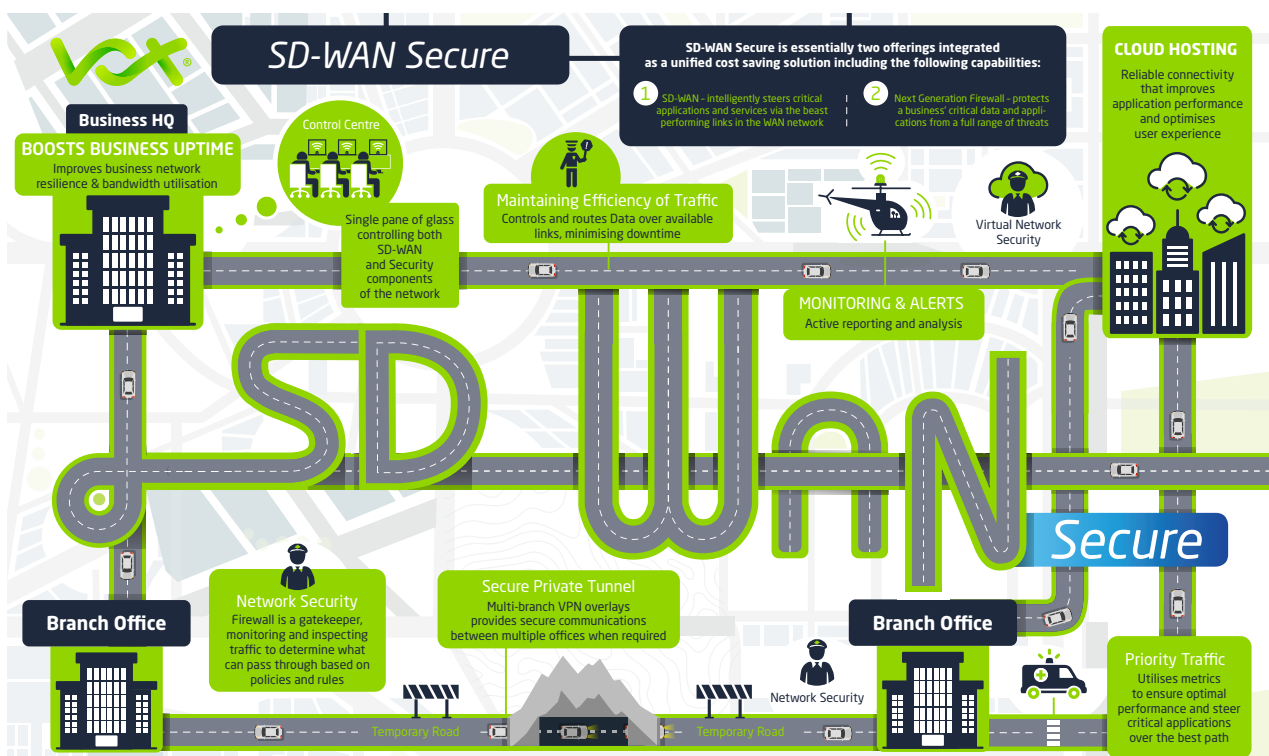

It supports Multi-branch VPN overlays, dynamic policy-based decisions for application path selection all across multiple independent WAN connections, consolidated management, and advanced protection against threats.

SD-WAN Secure can reduce operational cost and complexity, improve efficiency, all without compromising on security.

SD-WAN Management Services include the following:

- Professional services from Vox to install, configure and implement the SD-WAN Secure services for the customer.
- Providing the customer with the ability to review network and device performance data.
- Providing the customer with the ability to manage users and edit user profiles.
- Providing security alerts
- Allowing the customer to manage configurations via change control actions as logged through the ticket support process.
- Remote monitoring and support.
- Implementation and management of VPN Multi-branch overlays in the customer's network.
- Providing the customer with access to SD-WAN Secure related reports through the Customer Support Portal.

How It Works
