- Caters for, Dedicated Internet Access, Multi-Branch Connectivity, Quality Voice or Direct Layer 2 Handovers
- Enjoy carrier grade connectivity without breaking the bank.

What Dedicated Fibre Offers

Uncontended Bandwidth

Delivering True 1:1 Bandwidth for local and international traffic without any Fair Use Policies (FUP).

High Reliability

Locally and Internationally, the Vox POPs are backed by multiple diverse routes to ensure delivery of customer traffic.

Low-Latency

Extensive local peering and a self-managed International network that provides low-latency.

Comprehensive SLA

Delivering dedicated support with clear visibility of service performance.

Versatility of Services

Enables stacking of different services, which guarantees better quality for each application without sacrificing service performance.

Customisable and Scalable

Tailored to fit your business needs now and into the foreseeable future as your business grows.

High Speed

Delivering Bandwidth from 10 Mbps up to 1 Gbps, 10 Gbps, 40 Gbps or 100 Gbps.

Enables Network Expansion

Options which can be used as a reliable backhaul to serve your customers.

Secure Core Network

A service that runs on a network, which has DDOS attack detection and mitigation enabled locally and internationally, with options to extend this protection to your own network.

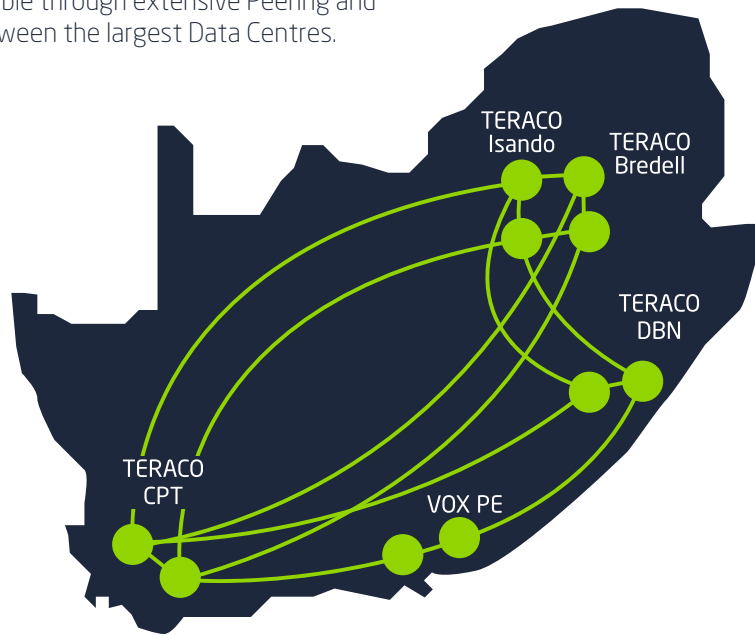

Availability of Various Failover Services

Auto-failover services can be added to your solution to enhance reliability even more, whether on Fibre or Wireless technologies.

Vox **Dedicated** Fibre

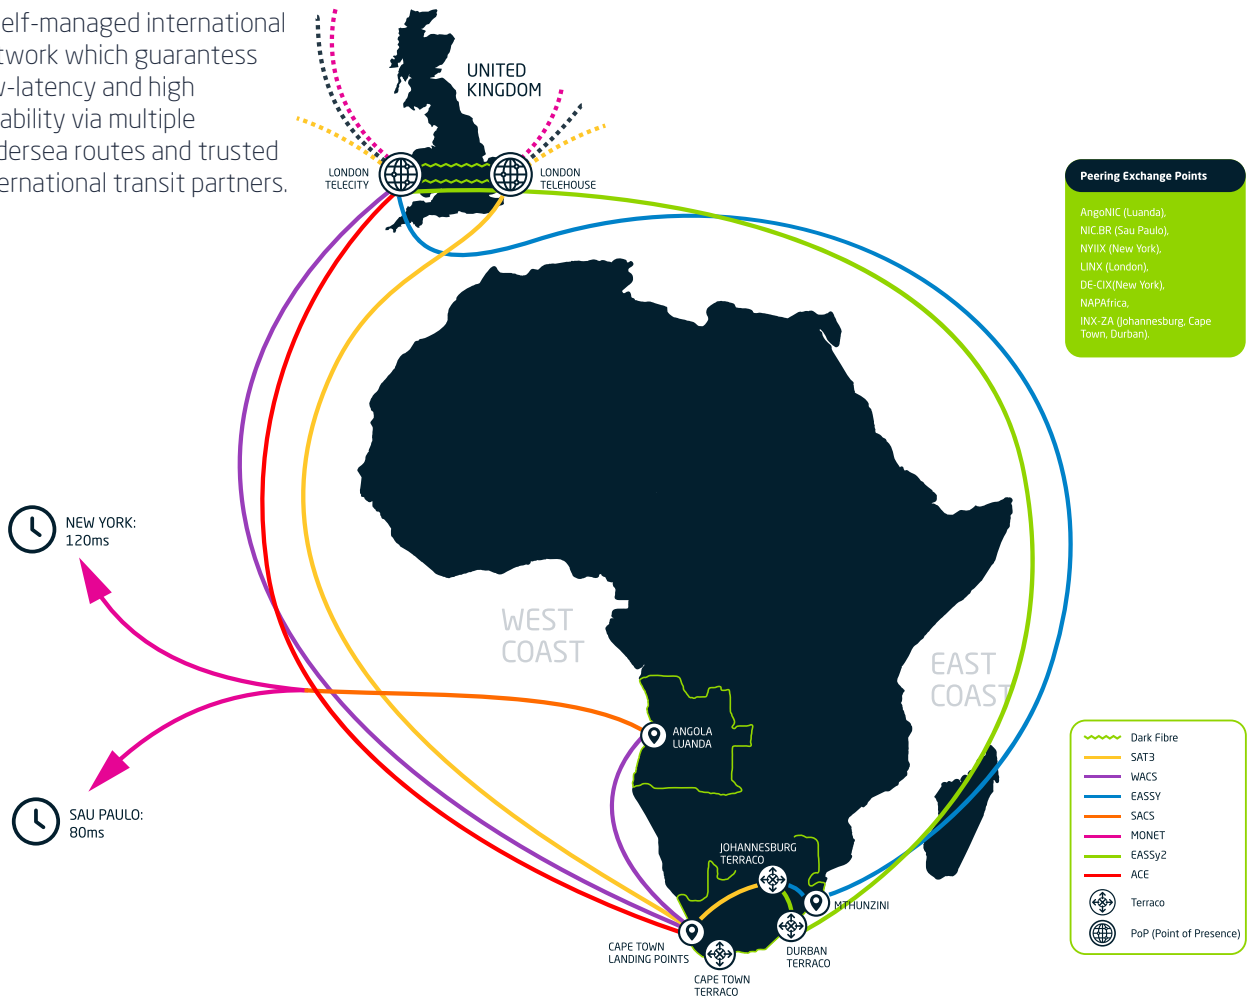

Vox Local Network

We at Vox boast one of the largest, most reliable networks in South Africa, made possible through extensive Peering and diverse connectivity between the largest Data Centres.

Vox International Network

A self-managed international network which guarantees low-latency and high reliability via multiple undersea routes and trusted international transit partners.

Vox Fibre

Dedicated Fibre Service Offerings

Dedicated Internet Access (DIA)

Delivering an Uncontended (1:1), high-quality connection to the Internet on Vox's Fully Managed **Premium** network.

IP Transit (IPT)

Expanding the reach of your Internet network on Vox's **Premium** fully managed local and international network or via a cost-effective 3rd party IP Transit **Xpress** network.

Cloud

For a direct, low-latency connection to your Data in the Cloud, whether located in the Vox Cloud or a 3rd party Cloud environment.

Multiprotocol Label Switching (MPLS)

Connecting all your branches in a Class of Service enabled private network.

Quality Voice

Providing a Dedicated link to run uncontended voice at very competitive voice rates for each application without sacrificing service performance.

Layer 2

Here, all you need is the connection handed over to your network so you can provide the services.

SD-WAN

Compatible with SD-WAN Secure to ensure highly resilient, secure communications between multiple branches.

With a **single Vox Dedicated Fibre link**, we can tailor a solution for your business containing a **combination of any of these services**.

Available on the Following Fibre Networks

We have partnered with the below Fibre Network Operators, which means Vox Fibre Dedicated can be delivered almost anywhere in South Africa. In addition, We have many alternative connectivity options available where Fibre isn't feasible.
